Name:

Imagine a creature with a shiny metallic body and huge stunning eyes; that's a horse fly for you! These unique critters, which can be found all over the world, are about an inch long and have a pair of clear, large wings that help them zoom around. Their bodies are colored in different shades of brown and black, and if you look closely, you'll see that they have large, brightly colored eyes that can see in almost all directions. But don't let their good looks fool you, these fellows can be quite a nuisance.

Speaking of being a nuisance, have you ever wondered what

horse flies eat? These creatures are not vegetarians, oh no! They feed on blood, particularly from large mammals like cows, horses, and even humans. They use their sharp mouthparts to bite and create a small wound, from which they then suck up the blood. It's not the most pleasant dinner routine, but it's how they survive.

Now that we have an idea of their diet, let's dive into their life cycle. After a female horse fly has had her fill of blood, she lays her eggs on plants near water bodies. When these eggs hatch, the larvae fall into the water where they start their life, feeding on other small insects and organic matter. After several stages of growth, they emerge from the water as adults ready to start the cycle all over again.

You might be thinking, 'how different can these flies be from others?' Well, there are a few things that set horse flies apart. Unlike other flies, they are active during the day, they are larger, and they have a painful bite. Their bite can be quite annoying to humans and animals, but they play an important role in the ecosystem by helping to control other insect populations. So, while they might not be our favorite creatures, horse flies are a fascinating part of our world with their unique life cycle and survival strategies.

Solv	e each problem.		
Use	the article to answer the question.		
1)	What do horse flies wings look like?		
	A. They are solid gray.		They are transparent.
	C. They are white with gray stripes	D.	They are gray with white stripes
2)	How big are horse flies compared to other fl	ies?	
	A. They are larger than most other flies.	B.	They are the same size as most other flies.
	C. They are smaller than most other flies.	D.	They can be smaller, larger, or the same size as other flies depending on the horse fly.
3)	What do horse flies eat?		
	A. They eat blood.	B.	They eat nuts, seeds, and fruits.
	C. They eat plants and nectar.	D.	They eat other insects.
4)	What is the role of horse flies in the ecosyste	em?	
	A. They help spread seeds.		They help fertilize plants.
	C. They help to control other insect populations.	D.	They help pollinate flowers.
5)	What do horse flies larvae eat?		
	A. Insects and organic matter	B.	Worms and crickets
	C. Seeds and nuts	D.	Leaves and bark
6)	What are the colors of a horse fly's body?		
,	A. Shades of blue and purple.	B.	Shades of brown and black.
	C. Shades of red and orange.	D.	Shades of green and yellow.
7)	Where does a female horse fly lay her eggs?		
.,	A. In animal nests or burrows.		Deep in the soil.
	C. On plants near water bodies.	D.	On leaves high up in trees.
8)	How do the horse fly larvae start their life?		
0)	A. They eat their way out of the leaves	B.	They consume the fruit they were laid
	where the eggs were laid.		on.
	C. They fall into the water from where they hatch.	D.	They dig up from the soil where they were born.
9)	What is a special about the eyes of a horse fl	ies?	
	A. The can look in two different directions at once.		They are blind and use sound to navigate.
	C. They can see in almost all directions.	D.	They have thousands of tiny eyes for looking everywhere.

	Horse Fl	ies	Name:		
10)	When are horse flies active?				
- /		B. They are active during the r	night.		
	C. They are only active during twilight hours.	D. They are active during the c	lay.

Name:

Imagine a creature with a shiny metallic body and huge stunning eyes; that's a horse fly for you! These unique critters, which can be found all over the world, are about an inch long and have a pair of clear, large wings that help them zoom around. Their bodies are colored in different shades of brown and black, and if you look closely, you'll see that they have large, brightly colored eyes that can see in almost all directions. But don't let their good looks fool you, these fellows can be quite a nuisance.

Speaking of being a nuisance, have you ever wondered what

horse flies eat? These creatures are not vegetarians, oh no! They feed on blood, particularly from large mammals like cows, horses, and even humans. They use their sharp mouthparts to bite and create a small wound, from which they then suck up the blood. It's not the most pleasant dinner routine, but it's how they survive.

Now that we have an idea of their diet, let's dive into their life cycle. After a female horse fly has had her fill of blood, she lays her eggs on plants near water bodies. When these eggs hatch, the larvae fall into the water where they start their life, feeding on other small insects and organic matter. After several stages of growth, they emerge from the water as adults ready to start the cycle all over again.

You might be thinking, 'how different can these flies be from others?' Well, there are a few things that set horse flies apart. Unlike other flies, they are active during the day, they are larger, and they have a painful bite. Their bite can be quite annoying to humans and animals, but they play an important role in the ecosystem by helping to control other insect populations. So, while they might not be our favorite creatures, horse flies are a fascinating part of our world with their unique life cycle and survival strategies.

## Solve each problem.

	e each problem.		
	the article to answer the question.		
1)	What do horse flies wings look like?	р	
	A. They are solid gray.		They are transparent.
	C. They are white with gray stripes	D.	They are gray with white stripes
2)	How big are horse flies compared to other flie		
	A. They are larger than most other flies.	B.	They are the same size as most other flies.
	C. They are smaller than most other flies.	D.	They can be smaller, larger, or the same size as other flies depending on the horse fly.
3)	What do horse flies eat?		
	A. They eat blood.	В.	They eat nuts, seeds, and fruits.
	C. They eat plants and nectar.	D.	They eat other insects.
4)	What is the role of horse flies in the ecosystem	m?	
í	A. They help spread seeds.		They help fertilize plants.
	C. They help to control other insect populations.	D.	They help pollinate flowers.
5)	What do horse flies larvae eat?		
í	A. Insects and organic matter	B.	Worms and crickets
	C. Seeds and nuts	D.	Leaves and bark
6)	What are the colors of a horse fly's body?		
-)	A. Shades of blue and purple.	B.	Shades of brown and black.
	C. Shades of red and orange.		Shades of green and yellow.
_	-	2.	
7)	Where does a female horse fly lay her eggs? A. In animal nests or burrows.	D	Deep in the soil
			Deep in the soil.
	C. On plants near water bodies.	D.	On leaves high up in trees.
8)	How do the horse fly larvae start their life?		
	A. They eat their way out of the leaves	В.	They consume the fruit they were laid
	where the eggs were laid.	P	on.
	C. They fall into the water from where they hatch.	D.	They dig up from the soil where they were born.
9)	What is a special about the eyes of a horse fli	es?	
	A. The can look in two different	В.	They are blind and use sound to
	directions at once.		navigate.
	C. They can see in almost all directions.	D.	They have thousands of tiny eyes for

	Horse Flies	Name:	Answer Key				
10)	When are horse flies active?						
	A. They are active all the time, night and B. They are active during the n day.	night.					
	C. They are only active during twilight D. They are active during the d hours.	lay.					
	Determine if the statements is something the animal would say (W) or it it is not something the animal would say (N).						
11)	"I never cause any problems for humans or animals."						
12)	"I love dry climates."						
13)	"I feed on blood, especially from large mammals like cows and horses."						
14)	) "I can't see well because my eyes are so small."						
15)	"I only come out at dusk."						
16)	"I don't like eating blood, I prefer munching on leaves."						
17)	"I lay my eggs on plants near water bodies like rivers and lakes."						
18)	"I am larger than some other types of flies."						
<b>19</b> )	"Using my large eyes, I can see almost everywhere."						
20)	"Once born, we are instantly adult horse flies ready to fly."						
21)	"My favorite meal is a juicy fruit."						
22)	"Our bites are soft and you will barely feel anything."						
23)	"I use my sharp mouthparts to pierce the skin and then I suck up the blood fro victim."	om my					
24)	"As a larva, I live high up in the trees."						

- 25) "My bite can be quite bothering to humans and animals."
- 26) "The start of my life is spent in water after I hatch from an egg."
- 27) "As a larva, I feed on other small insects and organic matter."
- 28) "We horse flies are vegetarians and love to munch on leaves and grass."
- 29) "My body is covered in different shades of brown and black."
- **30)** "Unlike some other flies, you'll find me buzzing about during the day."

## Determine if the statement is a fact or opinion based on the information in the article.

- 31) After feeding, female horse flies lay eggs on plants near water bodies.
- **32)** Horse flies have a beautiful metallic shine on their body.
- **33)** Horse flies bite in order to feed on blood.
- 34) Horse flies, with their large eyes, are scarier than any other insect.
- **35**) Horse flies exist all around the world.
- **36)** Horse flies, with their painful bites, are the worst kind of flies.
- **37)** Horse flies are mostly active during the day.
- **38)** The diet of horse flies mainly consists of blood from large mammals.

	Horse l	Flies	Name:	Answer Key		
<b>39</b> )	The way horse flies survive by feeding on blood is a bit gross.					
<b>40</b> )	Horse flies are big and scary compared to o	ther flies.				
Det	ermine if the statement is true or false.					
41)	Horse fly larvae feed on other small insects	and organic matter.				
42)	Horse flies are only found in North America	a.				
43)	Horse flies are carnivorous and they feed on	1 blood.				
44)	Horse flies eat plants and leaves.					
45)	The eyes of a horse fly can see in most dire	ctions.				
<b>46</b> )	Horse flies are nocturnal creatures, being m	ost active during the night.				
47)	Horse flies are smaller than other flies.					
<b>48</b> )	The female horse fly lays her eggs on plants	s near the desert.				
<b>49</b> )	Horse flies can see in almost all directions.					
<b>50</b> )	Horse flies can be about an inch long.					
Det	ermine which choice is the expanded form	of the underlined contraction.				
51)	It's important to wear insect repellent when	you're around horse flies.				
	A. It was	B. It is				
	C. It has	D. It were				
52)	Horse flies can't fly very far, so they usually	stay close to their breeding sites	5.			
	A. cannot	B. can able				
	C. will not	D. do not				
53)	Horse flies don't like the cold and are most a	active during warm months.				
	A. does not	B. cannot				
	C. did not	D. do not				
54)	Horse flies aren't good at night, so they're m	ost active during the day.				
	A. are not	B. are able				
	C. will not	D. cannot				
55)	They're often found near swimming pools and	nd beaches, bothering people.				
	A. They is	B. Them are				
	C. They are	D. They were				
	ermine if the sentence is a declarative(d), e	xclamatory(e), interrogative(i)	or			
-	erative(m). Horse flies can be so annoying!					
50) 57)	Avoid horse flies by staying away from wet	areas				
57) 58)	What happens when a horse fly bites?	arcas.				
59)	Ouch, horse fly bites really hurt!					
,	Horse flies are known for their painful bites					

- **60)** Horse flies are known for their painful bites.
- **61**) How big are horse flies?

	Horse Flies	Name:	Answer Key			
62)	Female horse flies need blood to lay their eggs.					
63)	) Where do horse flies lay their eggs?					
64)	Horse fly larvae live in water or moist soil.					
65)	Protect yourself from horse fly bites by wearing long sleeves.					

**66)** It's amazing how fast horse flies can fly!

\_

**67**) Apply insect repellent to keep horse flies away.
