

Get ready to meet one of the coolest critters in the forest, the Northern Flying Squirrel! Don't let their name fool you, these squirrels can't actually fly like birds, but they are experts at gliding from tree to tree. With big, bright eyes, a fluffy tail, and a special skin flap called a 'patagium', they look like tiny superheroes in the night sky. Their soft, grey-brown fur helps them blend in with the trees, making them hard to spot.

Speaking of trees, that's where Northern Flying Squirrels love to hang out. They can be found in the forest regions of North America, from Alaska to California, living in tree holes or nests made of bark and leaves. They're nocturnal, which means they're most active during the night, when the forest comes alive with all sorts of interesting sounds and movements. Being high up in the trees also keeps them safe from many predators on the ground.

Just like us, Northern Flying Squirrels have a favorite snack: nuts! But that's not all they eat, they also munch on fruits, insects, bird eggs, and even tree bark. They share their forest homes with other animals like owls, raccoons, and foxes, and sometimes, these neighbors can become a bit too interested in them. To protect themselves, they'll use their amazing gliding skills to escape or hide in their tree homes.

So, what makes Northern Flying Squirrels different from other squirrels? Well, unlike their cousins, the Gray Squirrels, they're smaller and have that unique skin flap that helps them glide. Northern Flying Squirrels also have a neat trick - they use their tail as a rudder, steering themselves as they glide through the air. So next time you're in a forest, keep an eye out for these amazing animals, and remember, there's always more to discover about the incredible world of nature!

**Solve each problem.****Use the article to answer the question.**

- 1) Where might a Northern Flying Squirrels live?
 - A. In a cave
 - B. a tree hole
 - C. in an underground burrow
 - D. in the bank of a river

- 2) What is a Northern Flying Squirrel's favorite snack?
 - A. Insects
 - B. Nuts
 - C. Fruits
 - D. Seeds

- 3) When are Northern Flying Squirrels most active?
 - A. They are most active during the afternoon.
 - B. They are most active during the day.
 - C. They are most active during the morning.
 - D. They are most active during the night.

- 4) Can Northern Flying Squirrels actually fly?
 - A. No
 - B. Yes
 - C. Only newborn squirrels
 - D. Only adult squirrels

- 5) What is the color of Northern Flying Squirrels' fur?
 - A. Red
 - B. Grey-brown
 - C. Black with brown stripes
 - D. White with black spots

- 6) Where can Northern Flying Squirrels be found?
 - A. They can be found in the plains of Asia, from China to India.
 - B. They can be found in the grasslands of Australia.
 - C. They can be found in the deserts of Africa, from Algeria to South Africa.
 - D. They can be found in the forest regions of North America, from Alaska to California.

- 7) How do Northern Flying Squirrels protect themselves?
 - A. They use their ability to produce a bad smell to deter predators.
 - B. They use their ability to change color to blend in with their surroundings.
 - C. They use their sharp claws to fight off predators.
 - D. They use their gliding skills to escape or hide in their tree homes.

- 8) What makes Northern Flying Squirrels different from Gray Squirrels?
 - A. They have a bushier tail and a different diet.
 - B. They are larger and have a unique skin coloration that helps them blend in.
 - C. They are smaller and have a unique skin flap that helps them glide.
 - D. They make a different sound and live in different habitats.

- 9) What do Northern Flying Squirrels use to steer themselves when gliding?
 - A. Their claws
 - B. Their wings
 - C. Their fur
 - D. Their tail

- 36) Northern Flying Squirrels can fly like birds.
- 37) Northern Flying Squirrels are most active at night.
- 38) Northern Flying Squirrels are only active during the day.
- 39) Northern Flying Squirrels are only found in Alaska.
- 40) Northern Flying Squirrels only eat nuts.
- 41) Northern Flying Squirrels use their tails to steer while gliding.
- 42) Northern Flying Squirrels are grey-brown in color.

Determine if the sentence is a declarative(d), exclamatory(e), interrogative(i) or imperative(m).

- 43) Northern flying squirrels are nocturnal, which means they are active at night.
- 44) Are northern flying squirrels nocturnal animals?
- 45) Northern flying squirrels can glide for distances of up to 300 feet.
- 46) Northern flying squirrels have a flap of skin called a patagium that allows them to glide through the air.
- 47) How do northern flying squirrels glide through the air?
- 48) Where do northern flying squirrels live?

Solve each problem.

Use the article to answer the question.

- 1) Where might a Northern Flying Squirrels live? (paragraph 2)
 - A. In a cave
 - B. a tree hole
 - C.
 - D.
- 2) What is a Northern Flying Squirrel's favorite snack? (paragraph 3)
 - A. Insects
 - B. Nuts
 - C.
 - D.
- 3) When are Northern Flying Squirrels most active? (paragraph 2)
 - A. They are most active during the afternoon.
 - B. They are most active during the day.
 - C.
 - D. They are most active during the night.
- 4) Can Northern Flying Squirrels actually fly? (paragraph 1)
 - A. No
 - B. Yes
 - C.
 - D.
- 5) What is the color of Northern Flying Squirrels' fur? (paragraph 1)
 - A. Red
 - B. Grey-brown
 - C.
 - D.
- 6) Where can Northern Flying Squirrels be found? (paragraph 2)
 - A. They can be found in the plains of Asia, from China to India.
 - B.
 - C.
 - D. They can be found in the forest regions of North America, from Alaska to California.
- 7) How do Northern Flying Squirrels protect themselves? (paragraph 3)
 - A. They use their ability to produce a bad smell to deter predators.
 - B. They use their ability to change color to blend in with their surroundings.
 - C.
 - D. They use their gliding skills to escape or hide in their tree homes.
- 8) What makes Northern Flying Squirrels different from Gray Squirrels? (paragraph 4)
 - A.
 - B. They are larger and have a unique skin coloration that helps them blend in.
 - C. They are smaller and have a unique skin flap that helps them glide.
 - D.
- 9) What do Northern Flying Squirrels use to steer themselves when gliding? (paragraph 4)
 - A. Their claws
 - B.
 - C.
 - D. Their tail

- 10) What special skin flap do Northern Flying Squirrels have? (paragraph 1)
- A. Pteridium
 - B. Patagium
 - C.
 - D.

Determine if the statements is something the animal would say (W) or it it is not something the animal would say (N).

- 11) "During the daylight, I'm the most active and that's when you'll find me gliding from tree to tree." (paragraph 2)
- 12) "I have my favorite snacks: nuts! But I also munch on fruits, insects, bird eggs, and yes, sometimes even tree bark!" (paragraph 3)
