

Meet the Komodo dragon, the world's largest living lizard! These reptilian giants can grow up to 10 feet long and weigh up to 200 pounds, that's like a really big grown-up! They have rugged scales in various shades of brown, a long muscular tail, and a forked yellow tongue which they use to taste the air around them. Their large, curved and sharp claws help them in hunting and digging.

Speaking of hunting, let's dive into what these big lizards love to munch on. Komodo dragons are carnivores, which means they love to eat meat. Their meals can include anything from birds, invertebrates, and mammals, to even larger prey like water buffalo. They have a special venom in their saliva which helps them take down bigger animals and they can eat a whopping 80% of their body weight in a single meal!

Now, let's jet off to their home – the Komodo National Park in Indonesia. Komodo dragons love to live in hot and dry places on these islands, you'll often find them lounging in the sun. They lay eggs which hatch after around eight months, and the little dragons are ready to climb trees to escape predators. They live up to 30 years in the wild, growing and learning to become the apex predators of their habitat.

Having learnt about their life, let's see how they interact with others. Komodo dragons usually live alone, only coming together to breed or eat, and they are known to be quite territorial. While they don't have a lot of interaction with humans, they are known to attack when threatened, so it's best to admire these magnificent creatures from a distance. So, that's the Komodo dragon, a truly unique and fascinating creature, don't you think?

**Solve each problem.****Use the article to answer the question.**

- 1) What do Komodo dragons usually eat?
 - A. Leaves
 - B. Grass
 - C. Fruits
 - D. Meat
- 2) What color is a Komodo dragon's tongue?
 - A. Red
 - B. Yellow
 - C. Black
 - D. Blue
- 3) What is the world's largest living lizard?
 - A. Chameleon
 - B. Komodo dragon
 - C. Salamander
 - D. Iguana
- 4) Where do Komodo dragons live?
 - A. The Amazon
 - B. Indonesia
 - C. Africa
 - D. Antarctica
- 5) How long does it take for the eggs of Komodo dragons to hatch?
 - A. Around one year
 - B. Around two weeks
 - C. Around one month
 - D. Around eight months
- 6) What are the claws of Komodo dragons like?
 - A. Small and blunt
 - B. Long, straight, and blunt
 - C. Large, curved, and sharp
 - D. Medium-sized and curved
- 7) Up to how many years can Komodo dragons live in the wild?
 - A. 20 years
 - B. 40 years
 - C. 30 years
 - D. 50 years
- 8) What do Komodo dragons do when they feel threatened by humans?
 - A. They try to blend in with their surroundings
 - B. They run away
 - C. They hide
 - D. They attack
- 9) What do baby Komodo dragons do to escape predators?
 - A. Climb trees
 - B. Hide under rocks
 - C. Run fast
 - D. Swim in water
- 10) What helps a Komodo dragon take down bigger animals?
 - A. Venom in their saliva
 - B. Their fast speed
 - C. Huge body size
 - D. Their sharp claws
- 11) What diet type do Komodo dragons follow?
 - A. Herbivorous
 - B. Omnivorous
 - C. Carnivorous
 - D. Piscivorous
